

LIFESAVER PARTIES

If a child in your care stopped breathing would you know what to do?

It could be the difference between life and death.

A child who has stopped breathing will have irreversible brain damage within 4 - 6 minutes and will die within 8 to ten.

Do you know how to keep your child alive until help arrives?

- Our Lifesaver Party is the only program designed for parents, grandparent's babysitters and anyone else who cares for children.
- The program is divided into two sections: Infants (birth to 1 year) and Children (1 to 8 years)
- Easy to understand, step by step instructions are explained in every detail and accompanied by clear demonstrations.
- Carried out in the comfort of the home environment
- Based on the New Zealand Resuscitation Council guidelines.

Once you decide to be more than the average parent and become certified just pick up the phone and call, or flick me an email. I will be glad to arrange a class for you.

Since my schedule is flexible I can usually accommodate your choice of time, days or evenings.

The classes are two hours in length and each participant will get to practice with a manikin. A party is based on a class of 6 or more people. Training will be free for the party host.

See our contact page for details.
